Summary

Backend Developer & Problem Solver focused on building resilient systems and tackling complex logic. While I specialize in the Node.js/PERN stack, I am entirely technology-agnostic and thrive in high-stakes environments. This includes architecting and managing core infrastructure for a massive examination platform that processes data for over 50 lakh students and 50,000+ schools annually. Experienced in optimizing production bottlenecks, transitioning monolithic architectures into microservices, and scaling APIs to handle 10,000+ requests per second.

Technical Skills

- **Backend** : Node.js, Express.js, Go (Golang), TypeScript, JavaScript
- **Frontend** : React.js, TailwindCSS, Bootstrap, HTML5/CSS3
- **Database** : Postgres SQL, Redis
- **DevOps** : Docker, AWS (S3, EC2, RDS), Git, Microservices Architecture

Professional Experience

Shree Info Solution PVT LTD | Backend Developer

Oct 2024 - Aug 2026

Promoted from Intern to Full-time within 6 months based on performance.

- **Engineered a High-Throughput API Ecosystem**: Architected and scaled RESTful APIs using Node.js and Express.js, optimizing Postgres SQL queries and connection pooling to reliably handle 10,000+ requests per seconds.
- **Modernized System Architecture**: Spearheaded the transition to a scalable Microservices architecture, decoupling Auth, User, and OTP services to enable independent deployment and 24/7 system availability.
- **Advanced Security & Access Control**: Designed a sophisticated RBAC (Role-Based Access Control) system with multi-role support and global super-admin capabilities, ensuring granular security across the enterprise.
- **Performance Optimization**: Integrated Redis for server-side session management and high-speed data caching, significantly reducing database latency and improving user response times.
- **Hardened Application Security**: Implemented a multi-layered security strategy including JWT/Passport.js authentication, CSRF protection, and per-route rate limiting to mitigate DDoS and unauthorized access risks.

Projects

Automated Student Hall Ticket Engine:

- **High-Volume Concurrent Processing**: Engineered a Goroutine-based Go system to concurrently generate 900,000+ student hall ticket PDFs and package them into school-wise ZIP archives — cutting total processing time from 4+ hours to under 1.5 hours (60%+ reduction).
- **Automated Cloud Delivery & Observability**: Built an end-to-end pipeline that dynamically uploads school-assigned ZIP bundles to AWS S3 with full structured logging at every stage — enabling real-time progress tracking and zero manual intervention post-trigger.

Examination Management Platform:

- **Multi-Stakeholder Portal Coordination**: Managed live production delivery of a school-facing portal handling ZIP-based data distribution to teachers and students — coordinated download access per school, ensured 100% uptime during peak sessions, and maintained detailed session logs for full audit trails.
- **Executive Reporting & Dashboard Management**: Built and maintained an admin panel enabling organization leadership to monitor real-time logs, counts, dashboards, audit reports, and school credentials — allowing exam board reporting to happen faster and with zero manual bottleneck.
- **Data Pipeline & Compliance Tracking**: Developed a marks-entry system for schools to submit student results session-wise with automated report generation — ensuring every submission was logged, traceable, and reportable to the examination board with full accuracy.

Full-Stack Automated Job Application Pipeline (Personal Project):

- **Workflow Automation**: Built a bulk email system processing 500+ daily emails — modeled around enterprise CRM-style workflows with status dashboards (Pending, Processing, Completed, Error).
- **Communication Automation**: Designed templating logic for personalized outreach at scale — directly applicable to drafting executive communications and stakeholder reports.
- **Document Management**: Integrated AWS S3 for document management — organized, versioned, and securely stored large volumes of files.

Full-Stack Bus Reservation System (Personal Project):

- **End-to-End Project Ownership**: Independently scoped, designed, and developed a full-stack Bus Reservation System — managing requirements, database design, authentication, demonstrating ability to own a project from idea to production.
- **Multi-Component System Coordination**: Coordinated the integration of frontend, backend, and database layers using Docker Compose — ensuring all components worked together consistently across development and production environments, mirroring real-world cross-team delivery coordination.

EDUCATION

Adani Institute Of Infrastructure Engineering

2020-2024

Bachelor of Engineering in Information and Communication Technology

CGPA: 7.60/10
